Keyless to Keyed Conversion

1. Use our VIN search tool, available at www.morganolsonparts.com to identify your door handles and which lock cylinder they were fitted with.
 - Many of the non-locking door handles have a removable hole plug installed and can easily be converted to a keyed solution just by adding a lock cylinder. Proper identification of your existing door handle will aid in obtaining the correct lock cylinders for your vehicle.
2. If your handles do not have a removable plug, you will need replacement handles as well as lock cylinders.
 - Make note of your door handles mounting hole spacing and shaft size (5/16 or 3/8)
 - Some of the handles have a 3-3/4" shaft length and can be cut to length as needed.
3. Always include your key number(s) when ordering replacement keys. The key number is stamped on the key or on the face of the lock cylinder. (See page 7)

Disabling your Keyless System

Most keyless systems can be disabled easily.

Just unplug the wire harness from the control module.

- Manual operation will stay the same.
- If you need additional support disabling a keyless solenoid assembly, please call our Warranty department for disassembly instructions specific to your vehicle. 800-262-3437

Side Door Handle

If your side door handle has a removable plug, then you only need a lock cylinder.

Item #	Part #	Description	Shaft Size
1	47000689	Handle Locking Black	3/8 x 2-1/4"
